

Pollution

-the story of the traveling slippers-

Introduction

•Pollution is the world's largest environmental cause of illness and premature death, considered a major risk to the health of the planet, a cause of ecosystem destruction and is closely linked to global climate change.

Classification

•There are many types of pollution, from air pollution, water pollution, light pollution to noise pollution, all of which have negative effects on the human body

•Modern forms of pollution have increased by 66%, caused by industrialization, uncontrolled urbanization, population growth and the burning of fossil fuels

•More than 90% of deaths from pollution occur in low- and middle-income countries

•Pollution, climate change and biodiversity loss are the main global environmental problems of our time

- I'll give you some traveling slippers.
- You go to various places with them. Present a type of pollution, causes, eradication solutions
- You write the story of the landscape you see
